Importance of Restarting

Keeping all devices, computers and Chromebooks, up to date is very important not only for security but to also keep everything running smoothly.

- One important step that often gets missed when updating is to restart the device after updates are complete.
- For most updates to be applied you need to restart your computer. It is a good idea to restart your computer every week to ensure you have the latest updates.
- Windows will notify you when you have an important update ready. Please update right away.
- Also make sure your Chrome browser is updated.
- Update Chromebooks too!

All devices should be updated at the beginning of the year to ensure they are running properly and whenever you or your students notice an update notification please update right away.
